

1. Define research and explain the major parameters of research. What are constructs and variables in research?
2. Discuss the criteria and basis for choosing a research topic.
3. What is a research problem? Explain the process of defining and identifying a research problem.
4. Discuss the importance of literature review, identification of research gaps, formulation of research questions/objectives, and assessment of the significance and relevance of the problem.
5. What is research design? Explain its meaning, purpose, and importance in research. Discuss pure/basic research and applied research.
 6. Differentiate between qualitative and quantitative research designs. Explain their characteristics.
 7. Explain research designs on the basis of application. What is descriptive research?
8. Explain cross-sectional and longitudinal research designs in detail.
9. Discuss quantitative field studies, field experiments, and laboratory experiments. Explain their characteristics, procedures and advantages.
 10. Explain the different types of questionnaires used in research. Discuss open-ended and closed-ended questionnaires, disguised questions, and skip questions.
11. Describe the major steps involved in designing a good questionnaire.
12. What are measurement scales in research? Explain the different types of measurement scales.
13. Explain the major scale response formats used in research like Likert scales, graphic rating scales, and semantic differential scales.
14. Discuss the meaning of attitude, development of items/statements, selection of response categories, validity, reliability, and finalization of an attitude scale.
 15. Discuss the importance of sampling and explain how an appropriate sample can be selected to represent a research population.
16. Discuss random sampling, stratified sampling, systematic sampling, and multistage sampling.
17. Explain various methods of collecting primary data and major sources of secondary data, and discuss the advantages.
18. Explain the role of statistical techniques in converting collected data into meaningful research findings.
19. Explain parametric and non-parametric tests in research and discuss situations in which a researcher should select parametric or non-parametric methods.
 20. Explain the structure and major components of a research thesis/report.
21. Explain in detail how the Results and Discussion sections of a research report should be written.
22. What is a research proposal? Explain the major components of a research proposal.
23. Discuss the role of government, non-governmental, and international funding agencies in promoting research.
24. Explain the general process of identifying suitable funding opportunities, preparing and submitting proposals, evaluation of proposals, and factors that influence the success of research funding applications.
